DETAILED ACTION

Allowable Subject Matter

Claims 8 – 18 are allowed.

The cited prior art does not teach or suggest at least the limitations of the independent claims where Applicant's admitted prior art (Figs. 7 and 9) shows a circuit board having two input and two output connections along different sides, further comprising four PIN diodes but does not show the switch comprising ground connections much less having the ground connections formed in a portion other than a place directly under the connection electrodes (claim 8); having the ground connections formed in a portion other than a place directly under the connection electrodes and at least one of the four PIN diodes (claim 9); the switch comprising second and third layers each having a ground pattern and sandwiching the first layer (claim 10); or where connecting the two input and two outputs electrodes forms a quadrangle which is substantially at 45° to a corresponding side of a quadrangle formed by connecting the connection electrodes (claim 12); nor would it be obvious to combine the prior art thus the claims are allowable.

Newly cited prior art of Tsusnrari et al., by same Assignee, shows a similar switch configuration to that disclosed in Applicant's admitted prior art above but similarly only shows the principal configuration of the switch circuit comprising four diodes and two inputs placed along one side with two outputs along an opposite side but, like the prior art above does not teach or suggest the additional specific limitations of the independent claims, thus the claims are allowable.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tsurunari et al. shows a high-frequency switch
